Even though this is a classic and fun game, I can't recommend it because it CTD every time you try to end the mission.. Its beyond broken. Menu bleed, no controls assigned at startup, and when you try, it crashes. Going into game flies for 5 minutes and crashes. esc crashes. back button crashes. changing video settings crashes. Its just borked. Steam really needs to increase their quality standards.. With some sort of deja vu from a well known series of flight combat simulators games, the first experience with this game was bad, with low frame rates and crashes in Win10/64bit . A patch solved the situation and the game becomes playable. You can get it at the developer's web site. I enjoy it now. so sad the developer do not sell more games in steam. Remember to install the patch or you will be dissappointed.. Flying is pretty fun. It is more arcadish than sim. So if you like planes and just want to mess around you will enjoy this game. You have to mauually patch this game to not have any crashes for windows 7 and probably 8 too.. A great modern flight simulator that reminds me a lot of the 90's sims before they got rediculously complex. I thoroughly recommend it, but DON'T BUY IT FROM STEAM! Buy it from Third Wire directly! Third Wire are the developers, and they DON'T RECEIVE A SINGLE CENT from the sales of this on Steam, so you're only supported immoral publishers and their contracts.
